

# Daniel Deak

## Full-Stack Software Engineer

Hungary · deakdani04@gmail.com · EU citizen, open to relocation · [Portfolio](#) · [LinkedIn](#) · [GitHub](#)

---

### PROFILE

---

Full-Stack Software Engineer with 4+ years of experience across the .NET ecosystem and modern React frontends. I have shipped production systems in demanding environments, from a real-time AI financial platform to safety-critical automotive test frameworks, and I am comfortable owning features end to end, from API and database design to clean, responsive user interfaces. Currently completing a BSc in Computer Science with a minor in AI and Data Science, expected in 2027. EU citizen, available to relocate within the EU/Schengen Area and start by September 2026.

### CORE STACK

---

C# · .NET · ASP.NET Core · Blazor · React · TypeScript · Tailwind CSS · REST APIs · WebSockets · Agile · Microsoft SQL Server · Docker · Git · Clean Architecture

### WORK EXPERIENCE

---

#### Full-Stack Developer | PetakSys

Jul 2025 – Present

AI financial platform for a Swiss enterprise client · Remote

- Built a high-performance, real-time chat interface for an AI financial platform with React, TypeScript, and Tailwind CSS, using WebSockets to deliver low-latency bidirectional messaging.
- Created a C# and Blazor pipeline that automatically extracts and structures complex financial data from private equity notices and documents, replacing a slow manual workflow and saving the team considerable processing time.
- Designed modular portfolio management and CMS features using ASP.NET Core REST APIs and Microsoft SQL Server, creating an extensible architecture for future development.

#### Test Automation Engineer | Knorr-Bremse Nutzfahrzeuge

Nov 2023 – Jul 2025

Commercial vehicle brake systems · Remote

- Built a mission-critical automated testing framework in C# and .NET for commercial vehicle brake systems, raising testing accuracy by 50 percent and cutting execution time by 70 percent.
- Structured the framework around modular components so it could later support hardware-in-the-loop (HIL) testing without a rewrite.
- Collaborated with cross-functional engineering teams to keep the framework aligned with international safety standards.

#### Software Engineer | Knorr-Bremse R&D

Aug 2022 – Oct 2023

Internal developer tooling · Budapest

- Developed a proprietary IDE in C# and .NET 8 for internal scripting, with syntax highlighting, auto-completion, and live error checking that noticeably reduced manual scripting mistakes.
- Delivered features iteratively through Git/GitHub workflows, using peer code reviews to improve maintainability and code quality.

### TECHNICAL SKILLS

---

**Languages & Frameworks:** C# / .NET, ASP.NET Core, Blazor, React, TypeScript, Python, SQL, Next.js

**Frontend & UI:** Tailwind CSS, Bootstrap, responsive design, real-time WebSocket interfaces

**Backend & Architecture:** REST API design, Clean Architecture, Microsoft SQL Server, AI data extraction pipelines

**Tooling & Practices:** Git, GitHub, Docker, Agile / Scrum, code review, Visual Studio, VS Code

## EDUCATION

---

**BSc Computer Science (Minor: AI and Data Science)**

*Sep 2024 – Expected 2027*

*Eszterházy Károly Catholic University (distance learning)*

**Computer System Maintenance Technician** (*Vocational Trade Certificate*)

## ADDITIONAL

---

**Languages:** Hungarian (native), English (professional working proficiency)

**Relocation:** Available to relocate within the EU/Schengen Area

---
